Building a Personal Budget Tracker

Create a personal budgeting application using the React . The application should allow users to track their income and expenses, and check for savings or losses.

Landing Page:

1. Display total income, total expenses, and current savings or loss.
2. Options to:
 - Add Income
 - Add Expense

☐ Add Income:

- Clicking the "Add Income" button should reveal a form.
- Form should include:
 - Amount (number)
 - Source (text input)
- Validate inputs to ensure the amount is a positive number.

☐ Add Expense:

- Clicking the "Add Expense" button should reveal a similar form.
- Form should include:
 - Amount (number)
 - Category (text input)
- Validate inputs to ensure the amount is a positive number.

☐ Savings/Loss Calculation:

- Automatically calculate and display savings or loss based on total income and total expenses.
- Update the calculation in real-time as users add income or expenses.
